LUC ALLAIRE

Trois-Rivières, Qc, Canada

Software Developer · Kotlin Multiplatform · Backend · DevOps

wolf-361@hotmail.com

Github · Portfolio · LinkedIn

Software developer with 2 years of experience building production Kotlin Multiplatform apps for Android and iOS, with Spring Boot services, Angular front ends and CI/CD infrastructure behind them. Bilingual FR/EN.

TECHNICAL SKILLS

Mobile	Kotlin Multiplatform, Jetpack Compose, SwiftUI, Ktor, Koin, Room, SKIE, Coroutines/Flow
Frontend	Angular 21, TypeScript, Signals, Angular Material M3, RxJS, Vitest, Playwright
Backend	Spring Boot, NestJS, PostgreSQL, MySQL, REST APIs, JWT, OAuth
DevOps & Infra	Docker, TeamCity, GitHub Actions, Ansible, Traefik, Prometheus, Proxmox
Languages	Kotlin, Swift, TypeScript, Go, Python, C#

PROFESSIONAL EXPERIENCE

Simaudio – Software Developer — **April 2025 – Present**

- Reverse-engineered a partially documented proprietary TCP protocol to control MiND1 players, delivering a production-ready Kotlin command queue with mutex serialization and a keepalive coroutine.
- Architected a Kotlin DSL TeamCity pipeline backed in Git, refactored build configurations across 2 apps with AI tooling following a GitFlow rework, enabled Android and iOS delivery to Firebase App Distribution and TestFlight, and documented the setup for independent provisioning and restore.
- Established unit testing standards in the shared KMP module using the AAA pattern, contributing to continuous integration test coverage across Android and iOS.

UQTR · STI IDEV Team – Software Developer (Internship) — **May – August 2024**

- Developed a Jira project-tracking plugin via Atlassian Forge, refactored a legacy inventory plugin's data model for stability across the Atlassian suite, and engineered a TypeScript CLI that eliminated local environment configuration discrepancies.

UQTR – Research Assistant, Autonomous biopesticide-spraying robot — **2023–2024**

- Implemented and optimized an OpenCV/Python image-processing pipeline translating visual data into actionable navigation parameters.

SELECTED PROJECTS & ARCHITECTURE

Planific — **Kotlin Multiplatform · Compose · SwiftUI · Spring Boot · PostgreSQL**

- Architected a cross-platform app on strict MVI unidirectional data flow, with 100% of domain logic, state and data in a shared KMP module and SKIE exposing Kotlin StateFlows as native Swift AsyncSequences for iOS.
- Built the backend as a Spring Boot and Kotlin REST API on Google Cloud Run, applying Clean Architecture with feature-first modules from my open-source starter templates.

Personal Portfolio — **Angular 21 · Signals · Material M3 · Vitest · Playwright**

- Bilingual Angular 21 single-page app using Signals and httpResource() with no RxJS in components, with ESLint-enforced import boundaries and ADR-documented architecture.

Home Ops Infrastructure — **Ansible · Docker · Traefik · Debian**

- Bare-metal Debian cluster, 12 Ansible roles, 9 stacks, reproducible from a fresh install with one command. Dual-path network (NetBird, Cloudflare), mTLS, Authelia SSO, Prometheus/Grafana/Loki.

EDUCATION

B.Sc. Computer Science — *Dean's Honor List 2023 & 2024* — Université du Québec à Trois-Rivières

B.Sc. Chemistry — Université du Québec à Trois-Rivières
