

LUC ALLAIRE

Software Developer · Kotlin Multiplatform · Android · iOS

✉ wolf-361@hotmail.com 📍 Trois-Rivières, Qc, Canada

[Github](#) · [LinkedIn](#) · [Portfolio](#)

Mobile Developer (Android / iOS / KMP) · Open to remote

SKILLS

Mobile	Kotlin Multiplatform · Jetpack Compose · SwiftUI · Ktor · Koin · Room · SKIE · Coroutines/Flow
Web	Angular · TypeScript · NestJS · PostgreSQL
DevOps	Docker · TeamCity · GitHub Actions · Ansible
Languages	Kotlin · Swift · TypeScript · Go · Python · C#

WORK EXPERIENCE

Simaudio – Software Developer

2025 – Present

Éric Gagnon, R&D Director – egagnon@simaudio.com

- Reverse-engineered an undocumented proprietary TCP protocol to control MiND1 players, delivering a production-ready Kotlin command queue with mutex serialization and a keepalive coroutine — with zero prior documentation.
- Rebuilt the full TeamCity pipeline (Docker Compose on Mac mini) for the .NET → KMP migration, enabling end-to-end Android + iOS delivery to Firebase App Distribution and TestFlight with a manual production gate.
- Restructured the physical-device test suite; contributed AAA-pattern unit tests on the shared KMP module.

UQTR · STI IDEV Team – Intern

May – August 2024

Alexandre Courchesne, Project Lead – alexandre.courchesne@uqtr.ca

- Developed a Jira project-tracking plugin using Atlassian Forge; migrated and hardened an existing inventory management plugin.
- Delivered a local bootstrapping CLI tool that reduced dev environment setup from several hours to a few minutes.

Research Assistant · Autonomous biopesticide-spraying robot

2023–2024

François Meunier, Professor at UQTR – francois.meunier@uqtr.ca

- Implemented an OpenCV/Python image-processing pipeline for an autonomous biopesticide-spraying robot; optimised existing code and authored technical documentation.

EDUCATION

B.Sc. Computer Science

Université du Québec à Trois-Rivières · 2022 – 2026

- Dean's Honor List 2023 & 2024

B.Sc. Chemistry

Université du Québec à Trois-Rivières · 2020 – 2022

EXTRACURRICULAR

Developer – ASUQTR (Autonomous Submarine)

2023–2024

- Replaced the full IT infrastructure (Atlassian suite); migrated Jetson Ubuntu 18.04 → 20.04 with full ROS reinstallation.
- Designed and developed the submarine's computer vision system (OpenCV/Python) for RoboSub.
